

PRINCIPLES OF RESEARCH IN INDIGENOUS CONTEXT: STEPPING STONES TO ESTABLISH ETHICAL COLLABORATIONS

DATE: To specify according to needs

DESCRIPTION: During this webinar, we are diving into the knots and bolts of all details that need to be thought of when elaborating research partnerships with indigenous communities. We will overview the research principles elaborated by the Assembly of First Nations and Inuit Tapiriit Kanatami, related to research ethics, consent, intellectual property and data sharing and ownership. Therefore, we hope that participants can leave the webinar with the information needed to start up their project on the right path.

OBJECTIVES :

- Overview the research principles elaborated by the Assembly of First Nations and Inuit Tapiriit Kanatami, related to research ethics, consent, intellectual property and data sharing and ownership.
- Identify the main organizations, right holders and individuals that need to be contacted when starting a project in the North.
- Elaborate a communication plan that contains short-term and long-term strategies.
- Discuss issues related to data ownership and archival, especially when a project includes indigenous knowledge.
- Discuss aspects related to research agreements with local communities, an avenue to consider when elaborating a project.

*According to your context and interests, this training can be adapted to suit your team and dive into your own personal or group challenges.

METHODOLOGY :

This is an ONLINE COURSE offered via the ZOOM platform. The course can be offered in either French or English, and includes concrete case studies and hands-on practices to move your projects forward. In addition to the course, participants will receive complementary written information and links towards essential external resources.
